|------------|-----------------------|------------------------------|
| ▪ React JS | ▪ MySQL and SQL       | ▪ JavaScript                 |
| ▪ Node JS  | ▪ REST API            | ▪ Bootstrap, Tailwind        |
| ▪ HTML     | ▪ Redux , Context API | ▪ Programming Languages      |
| ▪ CSS      | ▪ TypeScript          | (C, C++, Java , Python ,etc) |

## PROJECTS

### ▪ **To-Do List App**

The application allows users to add, mark, and delete tasks by managing task data in React component state and updating the UI dynamically.

- ***Monthly Activity Tracker***

It is a web application that allows you to log your activities and track them on a monthly basis. It utilizes React JS and the Local Storage API for implementation, and the structural design is based on code from Bootstrap's documentation.

- ***Dummy Website***

A simple frontend personal portfolio website created to practice UI layout, component structure, and basic styling using ReactJS.

- ***Text Editing App***

A frontend web application that allows users to perform basic text operations such as converting text to uppercase/lowercase, counting words and characters, and clearing text.
